

# Dynamic Multiplexer switching

MUD 4/ 8/ 16/ 32

Our dynamic multiplexer Type MUD was developed for the detection of high-frequency measurements. In contrast to the siblings of this product family the multiplexer Type MUD is not queried via a RS485 signal, but directly through a LAN network.

Due to the fact that the sensors have permanent power supply, the sensors do not require a settling time. Depending on the amount of measuring points in your project, the MUD is available in several sizes. They can be delivered in up to four expansion stages (4, 8, 16 or 32 channels).

Multiplexer Type MUD are expansions for sensors suitable for our data acquisition systems / measuring stations Type MCC XL. On site in a structure, each one will be connected individually via LAN-cable to the measuring station Type MCC XL.

The communication cable can have a length up to 1000m, if an optional supply unit is provided for each multiplexer. Each one needs to be connected to the main power supply. In direct connection to the measuring system, distances of 100m to a Dynamic Multiplexer switching (MUM) are possible.

Expansion Modules	Technical data	MUD 4	MUD 8	MUD 16	MUD 32
<ul style="list-style-type: none"> <li>■ Additional external supply unit</li> <li>■ Mounting bracket for pipes</li> <li>■ LAN Switch</li> <li>■ Network cable</li> </ul>	No. of channels:	4	8	16	32
	Dimensions l x b x h cm:	40 x 25 x 12,5	40 x 25 x 12,5	60 x 25 x 13	60 x 25 x 13
	Weight:	1.2	2.6	5.8	7.9
